

ERP SOFTWARE SYSTEM

Enterprise resource planning (ERP) Software System integrates internal and external information throughout the organization. The system automates all the financial, accounting, sales and management activities in one integrated software solution. Its purpose is to help the workflow of the information inside the organization, as well as enable connection with the external decision makers. ERP software solution can function on more hardware and network configurations, including database as information storage.

The system has the following characteristics:

- Works in a real time environment
- Single key data entry
- All the modules are integrated
